

Day 3 – Assignment

This task helps you become familiar with Cascading Style Sheets by building a simple web page for a travel agency.

Due

This assignment does not need to be handed in. Your instructor will review it the next morning so you can ask questions and get assistance with any problems you might encounter. You will build onto this assignment in the remaining assignments of this course. If you want feedback on your code you can ask your instructor to check it and give advice. You will be required to hand in the cumulative code on day 8 for marking.

Directions

In this exercise you will enhance the travel agency web pages to use Cascading Style Sheets to add styles to various HTML tags.

1. Download and link to an external stylesheet page that will reset your styles to defaults.
2. Create an external stylesheet file and link it into your pages to provide custom style settings.
3. Define style settings that will set the font type, size, and color of the text in your tags. Experiment with different settings for different tag types.
4. Define styles to control alignment on some of your tags.
5. Set up borders on some of your tags. 📄
6. Ensure that the input tags in your form all have a light background colour to make them more noticeable.
7. On the main page, use CSS to set a background image for the page (ensure that the image is light enough to use as a background image).
8. Make it responsive.

Feedback:

Your instructor will review this exercise with you the next day.

If you have any questions or wish to get some feedback on your work before the hand-in date, ask your instructor to review it with you after class.
